EXAMINER

LOVING, JARIC E

ART UNIT

PAPER NUMBER

2137

DATE MAILED: 10/05/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No.	Applicant(s)	
	10/623,296	EDWARDS ET AL.	
	Examiner	Art Unit	
	Jaric Loving	2137	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 18 July 2003.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-33 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-33 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 18 July 2003 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-33 are rejected under 35 U.S.C. 102(e) as being anticipated by Ramanathan, US 6,948,060.

In claim 1, Ramanathan discloses a system comprising:

a controller module comprising instructions for controlling a first component (col. 2, lines 34-48; col. 3, lines 1-7 – server controls network element); and

a second component with a security system that interacts with the controller module to implement a security protocol before a second component can control the first component based on executing the instructions in the controller module (col. 2, lines 34-48; col. 3, lines 1-17).

In claim 2, Ramanathan discloses the system as set forth in claim 1 wherein a portion of the instructions in the controller module comprises authentication instructions which when executed by the second component cause the second component to send authentication information to the first component to perform a portion of the security protocol (col. 3, lines 18-27 and lines 50-61; col. 4, lines 29-45).

In claim 3, Ramanathan discloses the system as set forth in claim 2 wherein the authentication information is associated with an operator of the second component, the first component authenticates the operator using the authentication information to perform another portion of the security protocol (col. 3, lines 7-27 and lines 50-61; col. 4, lines 29-45).

In claim 4, Ramanathan discloses the system as set forth in claim 2 wherein the first component authenticates the second component using the authentication information to perform another portion of the security protocol, wherein upon unsuccessful authentication the first component rejects messages from the second component and upon successful authentication the first component accepts the messages from the second component, the messages being associated with controlling the first component (col. 3, lines 7-27; col. 4, lines 29-55 – if not authorized, then no communication permitted).

In claim 5, Ramanathan discloses the system as set forth in claim 2 wherein the first component authenticates each of a plurality of messages received from the second component, the messages being associated with controlling the first component, wherein upon unsuccessful authentication of at least one of the messages the first component rejects the at least one message and upon successful authentication of another at least one of the messages the first component accepts the other at least one message from the second component (col. 4, line 55 – col. 6, line 4).

In claim 6, Ramanathan discloses the system as set forth in claim 1 wherein the security system decrypts an encrypted controller module to perform a portion of the

Art Unit: 2137

security protocol, the second component controls the first component based upon the execution of the instructions in the controller module (col. 4, line 55 – col. 5, line 4; col. 5, lines 8-33).

In claim 7, Ramanathan discloses the system as set forth in claim 6 wherein the security system uses a cryptographic key associated with one of the first component, the second component and a third component to decrypt the encrypted controller module (col. 4, line 55 – col. 5, line 4; col. 5, lines 8-33).

In claim 8, Ramanathan discloses the system as set forth in claim 1 wherein the security system authenticates the controller module using at least one of a digital certificate, a public key and a shared secret to perform a portion of the security protocol (col. 3, lines 29-36).

In claim 9, Ramanathan discloses the system as set forth in claim 1 wherein the security system rejects the controller module upon determining that a cryptographic signature associated with the controller module is not associated with a trusted component to perform a portion of the security protocol (col. 3, lines 44-61; col. 4, lines 18-29).

In claim 10, Ramanathan discloses the system as set forth in claim 1 wherein the controller module is encrypted using a cryptographic key from one of the first component, the second component and a third component (col. 3, lines 29-36; col. 4, line 55 – col. 5, line 4).

In claim 11, Ramanathan discloses the system as set forth in claim 1 wherein the controller module comprises a cryptographic signature associated with at least one of

Art Unit: 2137

the first component and one or more third components (col. 3, lines 29-36; col. 4, lines 18-29).

In claims 12 and 23, Ramanathan discloses a method and computer readable medium comprising:

providing a controller module comprising instructions for controlling a first component (col. 2, lines 34-48; col. 3, lines 1-7); and

interacting with the controller module to implement a security protocol before a second component can control the first component based on executing the instructions in the controller module (col. 2, lines 34-48; col. 3, lines 1-17).

In claims 13 and 24, Ramanathan discloses the method and computer readable medium as set forth in claims 12 and 23, respectively, wherein the interacting with the controller module to implement the security protocol further comprising:

executing a portion of the instructions in the controller module that comprises authentication instructions (col. 3, lines 18-27 and lines 50-61; col. 4, lines 29-45);

sending authentication information from the second component to the first component to perform a portion of the security protocol based on the executed authentication instructions (col. 3, lines 18-27 and lines 50-61; col. 4, lines 29-45).

In claims 14 and 25, Ramanathan discloses the method and computer readable medium as set forth in claims 13 and 24, respectively, further comprising authenticating an operator of the second component using the authentication information to perform another portion of the security protocol (col. 3, lines 7-27 and lines 50-61; col. 4, lines 29-45).

In claims 15 and 26, Ramanathan discloses the method and computer readable medium as set forth in claims 13 and 24, respectively, further comprising:

authenticating the second component using the authentication information to perform another portion of the security protocol (col. 3, lines 7-27; col. 4, lines 29-55);
and

rejecting messages from the second component upon unsuccessful authentication and accepting the messages from the second component upon successful authentication, the messages associated with controlling the first component (col. 3, lines 7-27; col. 4, lines 29-55).

In claims 16 and 27, Ramanathan discloses the method and computer readable medium as set forth in claims 13 and 24, respectively, further comprising:

authenticating each of a plurality of messages from the second component, the messages associated with controlling the first component (col. 4, line 55 – col. 6, line 4);
and

rejecting at least one of the messages from the second component upon unsuccessful authentication of the at least one message and accepting another at least one of the messages upon successful authentication of the other at least one message (col. 4, line 55 – col. 6, line 4).

In claims 17 and 28, Ramanathan discloses the method and computer readable medium as set forth in claims 12 and 23, respectively, wherein the interacting with the controller module to implement the security protocol further comprising:

decrypting an encrypted controller module to perform a portion of the security protocol (col. 4, line 55 – col. 5, line 4; col. 5, lines 8-33); and

controlling the first component based upon the execution of the instructions in the controller module (col. 4, line 55 – col. 5, line 4; col. 5, lines 8-33).

In claims 18 and 29, Ramanathan discloses the method and computer readable medium as set forth in claims 17 and 28, respectively, further comprising using a cryptographic key associated with one of the first component, the second component and a third component to decrypt the encrypted controller module (col. 4, line 55 – col. 5, line 4; col. 5, lines 8-33).

In claims 19 and 30, Ramanathan discloses the method and computer readable medium as set forth in claims 12 and 23, respectively, further comprising authenticating the controller module using at least one of a digital certificate, a public key and a shared secret to perform a portion of the security protocol (col. 3, lines 29-36).

In claims 20 and 31, Ramanathan discloses the method and computer readable medium as set forth in claims 12 and 23, respectively, further comprising rejecting the controller module upon determining that a cryptographic signature associated with the controller module is not associated with a trusted component to perform a portion of the security protocol (col. 3, lines 44-61; col. 4, lines 18-29).

In claims 21 and 32, Ramanathan discloses the method and computer readable medium as set forth in claims 12 and 23, respectively, further comprising encrypting the controller module using a cryptographic key from one of the first component, the second component and a third component (col. 3, lines 29-36; col. 4, line 55 – col. 5, line 4).

In claims 22 and 33, Ramanathan discloses the method and computer readable medium as set forth in claims 12 and 23, respectively, where the controller module comprises a cryptographic signature associated with at least one of the first component and one or more third components (col. 3, lines 29-36; col. 4, lines 18-29).

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: Balabine et al., US 7,069,438; Tuvell et al., US 6,986,046; Wheeler et al., US 6,938,156; Nordenstam et al., US 6,711,263; Hsu et al., US 5,982,898; Estrada et al., US 2004/0230793; Lee et al., US 2004/0064694; Kanungo et al., US 2005/0120212; Sudia, US 2005/0114666; England et al., US 2005/0060549; Kung, US 2005/0021954; Wheeler et al., US 2004/0128508.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jaric Loving whose telephone number is (571) 272-1686. The examiner can normally be reached on Monday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Emmanuel Moise can be reached on (571) 272-3865. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
